CO421 Proposal Peer Review

Group ID: 07

Reviewed project proposal title: Identifying keywords in legal articles using ML techniques

Review of the proposal

The aim and scope of the project are clear and well defined and the project seems feasible. When it is summarized, the objective of this project is to build a legal documents management system with the capability of auto-generating keywords. It also can be used to search for documents related to the given keywords. Here are some points that are worth mentioning.

The detailed specifications and outcomes are clearly mentioned. So the reader might get a clear understanding of the scope of the project. In the beginning, it is better if there is motivation as well. What exactly is the problem and difficulties currently the client is facing and why is it important to implement such a system. Then, how is the system going to support the client. Further, mention what difficulties or challenges are there in doing this project and what you suggest to overcome them.

Also, it's better if there is a mention of related work and what is the significance of your approach by highlighting gaps in this particular problem. Moreover, the provided web link reference would not lead readers what exactly writers are referring to. Therefore, it's good to add it in an informative manner.

1st and 2nd phases are not clearly mentioned in the proposal but in the project topic description, they are mentioned. Furthermore, some typology errors/ formatting errors can be seen at some points, especially the spacing between 2 words that are not managed properly.
So in order to overcome these, it is better to use some better writing etiquette and use a tool like Grammarly.
